

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph from line 10 through line 17 on page 8, as follows:

First, an advance-transmitting function is selected. Then, the telephone number of the receiving part facsimile 200 is input using the number and letter generating unit 172 of the OPE 170 as shown in FIGs. 2 and 5 (S50). In order to transmit fax data from the transmitting part facsimile 100 to the receiving part facsimile 200, a document is scanned and stored in the memory 150 (S100). When the document is completely scanned, the controller 110 dials the pre-inputted telephone number of the receiving part facsimile 200 to transmit the data stored in the memory 150 (S200). After the telephone number is dialed, it is determined whether a call for exchanging fax data between the transmitting part facsimile 100 and the receiving part facsimile 200 is connected or not (S300).
